PROCESS FOR DESULFURIZATION COMPRISING A STAGE FOR SELECTIVE HYDROGENATION OF DIOLEFINS AND A STAGE FOR EXTRACTION OF SULFUR-CONTAINING COMPOUNDS

Invention by Florent PICARD and Raphaël HUYGHE

ABSTRACT

Process for desulfurization of a hydrocarbon-containing feedstock that comprises at least one stage for selective hydrogenation of diolefins that are present in said initial hydrocarbon feedstock, in the presence of a catalyst of group VIII of the periodic table and a stage for extraction by a solvent of said hydrogenated fraction under conditions that make it possible to obtain at least two fractions:

- a raffinate that comprises for the most part olefins, paraffins and naphthenes
 and a reduced amount of sulfur-containing compounds that are contained in
 the initial feedstock,
- a fraction that contains the majority of aromatic hydrocarbons and the majority of sulfur-containing compounds that are contained in the initial feedstock.
